

## SUSTAINABILITY CRITERIA OVERVIEW

### SUSTAINABILITY CRITERIA EXPLANATION

#### Audited Factory (social standards)

LaMunt is a member of Fair Wear Foundation, a non-profit organisation which specialises in the improvement of working conditions in the textile industry. We choose factories that are serious about cooperating to this end, by signing our Code of Conduct and providing high standards for the workers. In countries where the risks for workers are higher, we carry out audits with expert third-party organizations, and agree on improvement plans where it is needed. Products marked with "x" are sewn in a factory located in lower-risk countries or monitored through audits and corrective measure plans.

#### HIGG Committed Factory

HIGG is a standard in the textile industry for assessing a factory's environmental and social sustainability performance. By committing to Higg, suppliers are transparent about their policies, processes and emissions, and can help to identify problems and take measures for the protection of factory workers and the environment.

#### Chemical Compliance Tested

LaMunt products are covered by the Oberalp Chemical Policy, an internal process to control the presence and use of chemical substances in our products and production processes. The policy is based on compliance with our Restricted Substances List (RSL), containing all chemicals that are excluded from or limited in all our products. Our suppliers must commit to fulfilling our Chemical Policy and most of the fabrics and trims we use are certified to external standards (like for example bluesign®). However, we want to make sure that our materials are safe and compliant, so we also conduct additional extensive testing with third-party laboratories.

#### PFC-free DWR

Many technical products in the market use Fluorocarbons (PFCs), chemicals that make them resistant to water, grease and stains. Eventhough they are highly performant, in high concentrations, PFCs have been linked to negative health effects in humans and wildlife. LaMunt water-repellent products use alternative chemicals that do not contain PFCs. (DWR = durable water resistant)

#### Recycled Material

Materials with recycled content have a lower environmental impact. LaMunt products marked with "x" are made with more than 50% recycled content overall, including fabrics and filling. We use recycled cashmere, nylon and polyester.

#### Natural Materials

LaMunt products marked with "x" are made with at least 50% natural fibers on the main fabric, lining or filling. We use cashmere to fill our warmer jackets, a blend of Merino Wool & Tencel® for next to skin t-shirts and inserts and a double-face technical mix of wool and recycled polyester for our thermals.

#### Animal Welfare Guaranteed

LaMunt products with merino wool and other virgin materials of animal origin are guaranteed to come from farms where animals are treated with care. Our wool comes exclusively from non-mulesed sheep. Some of the farms we source from are certified to the Responsible Wool Standard (RWS).

Code	Product	Supplier		Chemical Management		Materials*		
		Audited Factory Social Standards	HIGG committed factory	Chemical Compliance Tested	PFC-free DWR	Recycled Material	Natural Material	Animal Welfare Guaranteed
